

Powerglide Transmission, SBC Parts and welder

Posted by ask0329 - 16 May 2012 09:06

1.82 stock Powerglide Transmission. Torque convertor, shifter, linkage, cooler and lines. Everything worked when i pulled it out of my IMCA Modified 3 weeks ago. Upgraded to a Falcon. I paid \$250 for just the transmission when I bought it last year. I put 7 races on it and still ran fine. \$225 for everything or will seperate, just want it out of the garage at this point, taking up space. I also have Ford 9" 3.50 ring and pinion that could go with this package if needed.

Also have: (make offers)

SBC 400 stock heads

SBC 400 stock crank. Needs to be turned.

SBC 350 crank. Pretty sure its stock. It came with my car and I never used it and looks to be in good usable shape.

SBC 168 tooth flywheel/flexplate. Brand new. \$40

Napa 220 Stick Welder. Worked fine when last used. My father needed the whip back but gave me a new whip. It just needs the 220 plug end and the loops to mount on the posts on the welder. \$150

I can email or txt pics. email: andrewkiewfer@yahoo.com Would like all this stuff gone ASAP as I'm trying to upgrade parts on my car and pay off some bills. Its all just been sitting around in my garage takeing up space. Everything is located in Baldwinsville. I can meet within reason.
