

Weld Drag Lites & Slicks

Posted by slippery440 - 05 Jun 2011 11:36

I have 2 pair of Weld Drag Lites--- First pair are 10" wide with 29 x 9 x 15" Toyo drag slicks. The slicks have 2 1/8th mile runs. They hook real good. I just don't like the look of the car with small tires. Asking \$500 or B/O--- The second pair are 8" and have p235 x 70 street tires that are like new. The tread width is 8" and 28" TALL. Asking \$400 or B/O They fit MOPAR , CHEVY , FORD

What is the backspacing on the 10" wheels?

I just went out and measured them. They have 6 1/2 backspacing.

Would you sell just the wheels without the tires?

Yea 300 will take the wheels only. Cost me a few bucks and time to get the tires off and not hurt the rims.
